

Activity name:

Class: Pre primary

Date:

Description: The world of science is magical for kids. Young kids are very inquisitive by nature and Science is always surprising for them and offers a better understanding of the world around them. When kids participate in science activities, it nurtures their curiosity. Many science experiments can be done by using the easy material, children like to play with. It helps them to grow big ideas and understand fundamental concepts. Young kids always learn better by doing . All the students of Class Pre-Primary participated in the experiment of Float & Sink where they understood the concept by putting flowers, twigs, leaves, pencils, erasers, caps, sketch pens etc, into the water and got amazed to see how few things float and few things sink in the water.
