

SESSION - 2023 -24

Date	Description
25Sept23	Reverse Engineering
	<p>Stem education is not just about different subjects but is also a way of learning and thinking that prepares students for the multiple challenges and various opportunities. It helps in the problem solving, developing creativity, hands-on experiences, curiosity and language development. Most stem learning, especially in early childhood revolves around teaching through hands on experiences. Our very curious preschoolers explored roads maps by driving their toy cars, crossing the bridges, humps, red lights, zebra crossing, and tunnels built inside the school premises.</p>
