

Unveiling the Sun: A Safe Solar Observation by Young Astronomers

Grade 9 students, Udyat and Ritwik from the Astronomy Club, successfully assembled a telescope as part of their hands-on learning experience. Using a solar filter, they safely observed the sun, protecting their eyes from potential ocular damage caused by its intense glare. Through the telescope, they viewed the sun as a mesmerizing orange sphere, creating a truly remarkable visual experience. This activity was both inspiring and educational, sparking greater interest in astronomy and observational science for the young astronomers.
